Emad Yaghmaei is Research Fellow in Ethics and Technology at Delft University of Technology. He is also an advisor and evaluator for the European Commission's Science with and for Society programme. His main research interests concern the role of Responsible Research and Innovation (RRI) in industry. By combining context- sensitive and empirical research on RRI principles, he sought to illustrate how 'Responsibility' can enrich Research and Development (R&D) within companies and study on RRI principles in industrial context, with focus on demonstrating how industry can work productively together with societal actors to integrate methodologies of RRI into research and innovation processes. As a response to integrating RRI principles in industry he has been working on monitoring and assessing the strategic value of Responsible Innovation, where he studies different assessment strategies namely ethics assessment, risk assessment, impact assessment, and technology assessment. He would chair the track on the topic of **'**Monitoring and Assessing the Strategic Value of Responsible Innovation' at the Ethicomp conference in 2018.
