

Dr. Hamish A. Miller obtained his Ph.D. from The Queen's University of Belfast (UK) in 1999. In 2011, he joined the Italian National Research Council (CNR) in Florence (Italy) after 10 years working in the renewable energy industry. His major research interests involve nanotechnology and electrocatalysis in Fuel Cells and Electrolyzers including; the development of electrocatalysts for anion exchange membrane fuel cells, the electroreforming of renewable alcohols for co-production of chemicals and hydrogen and the electrochemical reduction of CO<sub>2</sub> to fuels and chemicals. He is the co-author of 43 scientific articles, 6 international patents, 1 book and 4 chapter contributions.
