

Dra. María Díaz-González obtained her PhD in Chemistry from the Universidad de Oviedo (Spain) in 2006 with a thesis focused on electrochemical biosensors. Then she did a three-year post-doc at Universidad Politécnica de Cataluña (UPC, Spain), working on the study of enzymatic processes for textile industry applications. Since 2010 she is a postdoctoral researcher at the Instituto de Microelectrónica de Barcelona (IMB-CNM, CSIC). Her area of expertise involves the development of advanced analytical microsystems integrating electrochemical/optical sensing devices.
