

Giorgio Gosti earned his PhD at the Institute for Mathematical Behavioral Sciences, which is part of the University of California, Irvine, and a Doctoral Degree at the Mathematics and Computer Science Department of the University of Perugia. He is currently a Postdoc at the Italian Institute of Technology in Rome. His past research focus is on the evolution of cultural conventions, such as signaling and lexical forms, and on models of cooperative social organizations, such as firms, forager societies. His current research focus is on self-organization in cell population and live cell imaging.
