

Dr. Felice C. Simeone is a research scientist at the Institute of Science and Technology of Ceramic Materials (ISTEC) of the National Research Council of Italy (CNR). He received a PhD in nanoelectrochemistry from the University of Ulm (Germany) and was a Post Doctoral Fellow in the Whitesides's group at Harvard University (USA).

During his previous appointments in the USA, Germany, and the Netherlands, he conducted research on nanoscience and nanotechnology relevant to energy production, electronics, biology. Currently, he combines physical-chemistry and Bayesian statistics to design and synthesize as-safe-as-possible nanomaterials.
