Adriano Sacco graduated *cum laude* in Electronic Engineering at the University of Palermo discussing a thesis on the characterization of UV photodetectors. In 2013 he received his Ph. D. in Electronic Devices from Politecnico di Torino with a thesis focused on the characterization of an innovative microfluidic architecture for Dye-sensitized Solar Cells. Currently he works at the Center for Sustainable Futures of Istituto Italiano di Tecnologia. The topic of his research activity is the electrical and electrochemical characterization of materials and devices for energy production and storage applications, as well as for CO₂ capture, storage and conversion. He is author of more than 70 papers published on international peer-reviewed journals.
