

Dr. Alberto Riminucci received his degree in Physics from the University of Bologna, Italy in 1998. He carried out his doctoral research at the University of Bristol, UK where he received his PhD in 2004. Since then he has moved to the Institute for the Study of Nanostructured Materials, Bologna. His research interests include tissue regeneration. His contribution to this field is based on his expertise on nanomagnetism. He collaborated in giving the first example of a magnetic scaffold for the regeneration of osteochondral tissue.
