

Maria Jose' Lo Faro received her PhD in Material Science from the University of Catania in 2017 with a thesis on the synthesis, optical properties and applications of silicon nanowires. She worked as a postdoctoral researcher at the CNR IPCF in Messina on the label free optical detection of bioorganisms. She is currently a postdoctoral researcher at the CNR IMM in Catania where her efforts are focused on the studying of light emission from Si nanostructures. She was awarded by the Italian Physical Society (SIF) for her scientific career and her papers were published on high impact journals.
